APPLICATION BRIEF - 26/0805

INDUSTRY: PULP AND PAPER

PRODUCT: TRANSMITTER ISOLATION VALVE

MEDIA: WEAK BLACK LIQUOR AND PULP STOCK

IMI PBM Solution:

A major pulp and paper manufacturer replaced linear knife gate valves with PBM's Transmitter Isolation Valve (TIV). PBM's TIV valve with easy ¼ turn operation eliminated problems with multi-stroke rachet handles and leaky packing that was experienced with the knife gate valves. PBM's versatile flange mounting configuration adapted to both the offset flange used to accommodate knife gates as well as standard flange connections. With PBM's reliable Transmitter isolation valve, level transmitters are more accessible and easier to calibrate.
