

## **APPLICATION BRIEF - 18/0805**

**INDUSTRY: CHEMICAL** 

PRODUCT: FLUSH TANK BALL VALVE WITH SINGLE SEAT, TRUNNION, SEGMENTED BALL, **AND PURGE PORTS** 

**MEDIA:** 

**RESINS** 

## **IMI PBM Solution:**

A major chemical manufacturer had problems with fast-setting resins plugging and seizing up drain valves used on their process reactors. PBM provided a valve solution with a low profile assembly that addressed the application issues and fit in the existing space of the problematic valves. The PBM design incorporated a single upstream seat, trunnion mounted segmented ball to facilitate draining, and 3 purge ports to introduce cleaning media that would remove any residual resin that adhered to the valve internals.
