

APPLICATION BRIEF - 03/0805

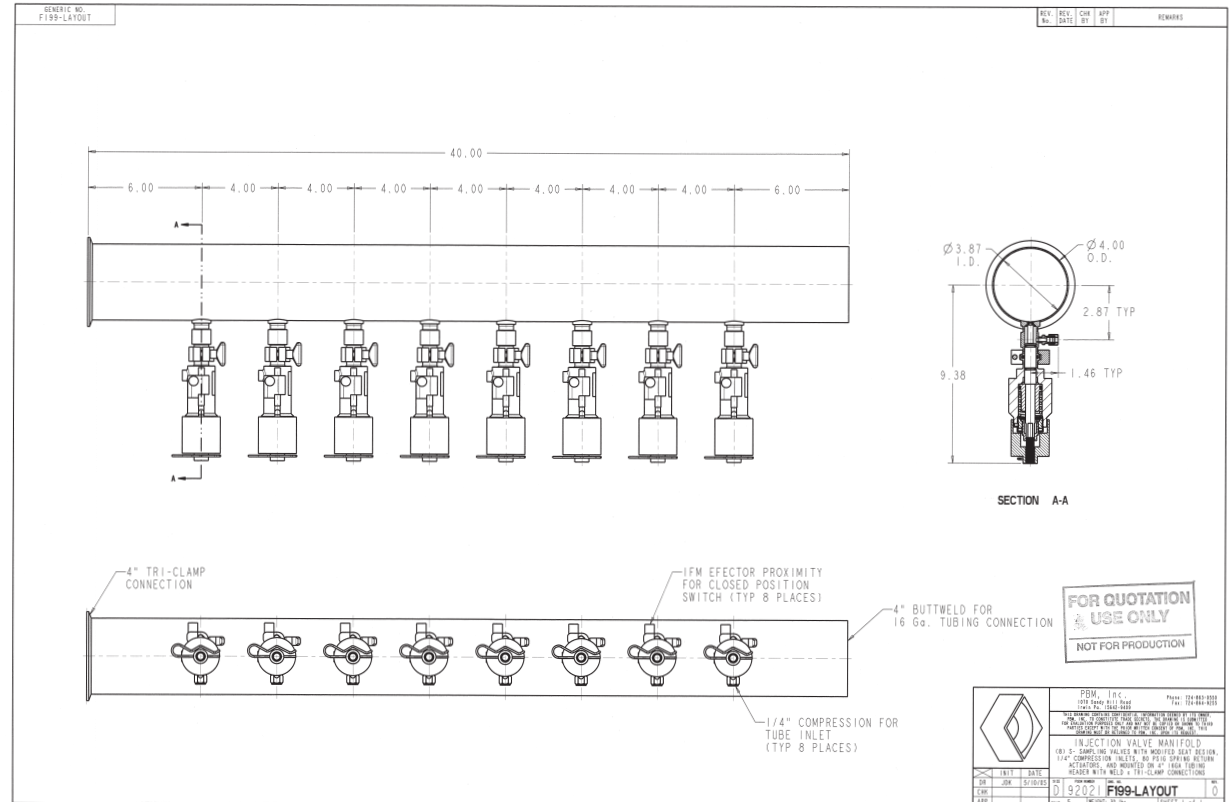

INDUSTRY: CONSUMER PRODUCTS

PRODUCT: FABFLEX® MANIFOLD WITH RISING STEM INJECTOR VALVES

MEDIA: FABRIC SOFTENER DYE

IMI PBM Solution:

A Midwest consumer products manufacturer required 8 automated sanitary valves to inject a controlled amount (0.1 Cv max) of dye into a 4 inch size main header containing liquid fabric softener. Each rising stem valve features a single acting actuator and a proximity switch to indicate valve “open” or “closed”. PBM’s Fablex® assembly also allows the flexibility of adding additional valves to the manifold as future needs arise.
