

# APPLICATION BRIEF - 03/0805

INDUSTRY: CONSUMER PRODUCTS

PRODUCT: FABFLEX® MANIFOLD WITH RISING STEM INJECTOR VALVES

MEDIA: FABRIC SOFTENER DYE

## IMI PBM Solution:

A Midwest consumer products manufacturer required eight automated sanitary valves to inject a controlled amount (0.1 Cv max) of dye into a 4-inch size main header containing liquid fabric softener. Each rising stem valve features a single acting actuator and a proximity switch to indicate valve "open" or "closed." IMI PBM's Fablex® assembly also allows the flexibility of adding additional valves to the manifold as future needs arise.
