

# APPLICATION BRIEF - 04/0805

INDUSTRY: CONSUMER PRODUCTS

PRODUCT: FABFLEX® MANIFOLD, OF 8 AUTOMATED VALVES USED FOR FRAGRANCE INJECTION

MEDIA: LIQUID LAUNDRY DETERGENT FRAGRANCES

## IMI PBM Solution:

A Midwest consumer products manufacturer required an automated manifold of valves to control the addition of multiple fragrances into liquid laundry detergent. IMI PBM designed a manifold of eight automated ball valves that could accommodate the application and fit in a tight space envelope. This prefabricated Fabflex® Manifold eliminated the need to fabricate the piping in the field and allowed the process to be up and running during only a brief shutdown period. IMI PBM's Fabflex® assembly also allows the flexibility of adding additional valves to the manifold as future needs arise.
