SANITARY IGENIX®
BLOCK & BLEED VALVES

FEATURES:
• Adjust-O-Seal® design safely allows for process isolation and instrument bleed.
• Ability to isolate, bleed off pressure and safely remove instruments which are in service on continuous service (i.e. clean steam lines).
• Allows instruments to be removed for calibration or replacement without shutting down main process lines.
• Retrofitable center section for existing installed IMI PBM valve.

PROBLEM:
Common instrument isolation valves retain pressure at instrument even when the isolation valve is off.

SAFE SOLUTION:
IMI PBM Sanitary Block & Bleed Valves prevent pressure build up near instrument. Once the instrument is de-energized, it allows the operator to safely disconnect the instrument.

Use IMI PBM’s Igenix® Sanitary Block & Bleed Valves to safely isolate the instrument.

These valves allow pressure to be vented safely prior to removing the instrument in place.
