

Industry: Pulp and Paper
Product: Transmitter Isolation Valve
Media: Weak black liquor and pulp stock

Application Brief: A major pulp and paper manufacturer replaced linear knife gate valves with PBM's Transmitter Isolation Valve (TIV). PBM's TIV valve with easy ¼ turn operation eliminated problems with multi-stroke ratchet handles and leaky packing that was experienced with the knife gate valves. PBM's versatile flange mounting configuration adapted to both the offset flange used to accommodate knife gates as well as standard flange connections. With PBM's reliable Transmitter isolation valve, level transmitters are more accessible and easier to calibrate.
